

Video Game Website Requirements
Mr. Fahrenbacher
VGPD

Due Date: Sunday, January 3rd.

Requirements. You need to create a website that sells your video game. I have put together a website that you can model yours **SOMEWHAT** after. I expect your website to look different, and preferably be prettier.

<http://sites.google.com/site/fahrenbizzlegames/home>

You may need to create your own Google Account that is separate from District 219, as they don't seem to allow students to create their own websites. Once you have an account, you can create a website by visiting this site:

<http://sites.google.com/>

You will want to design your site in a way that it can grow, as you will be adding at least two more games to your site! Multiple web pages would be a good idea.

Items that I EXPECT to be on your website:

- A **Description** of your game and **ALL** of its features
- Technical Aspects** of your game. This can include anything “fancy” you did in your code, the basic architecture of your game, etc.
- Known Issues** with your game. These are problems that you know you haven't fixed yet. It can include problems that you anticipate but have never seen before.
- A **Download** link for your game
- Pictures** of your game in action
- A **Paper** advertisement of your game
- EXTRA CREDIT**: A video Advertisement of your Game, posted to your website (youtube embed)
